SUBJECT INDEX

	No.	Page
Acceleration		
effect on pilot tracking task	4	229
Accidents		
aircraft (lightplane)	4	237
factor analysis of data	4	238
list of variables	4	239
relationship to impact and damage variables	4	242
Age		
distribution of air travel passengers	3	177
Aircraft		
accidents (lightplane)	4	237
emergency exit design	3	174
speed of, estimated visually	4	284
Anthropometry		
as related to design of aircraft emergency exits	3	174, 199
assessment by use of photogrammetry	1	36
measurements of pilots' and crews' body attitudes	1	38
measurements on test subjects in emergency exit studies	3	188
Astronaut		
description of task in Project Mercury	3	149
Authors (Biographical sketches)	1	74
	2	147
	3	210
	4	299
Behavior		
sensory–motor at different levels of sleep	1	3
Capsules		
escape	1	36
Mercury	3	151
Cockpit		
vertical accelerations in	4	229
Coding		
color	2	119, 129, 145
evaluation of abstract methods	2	120
target and background combinations	2	131
Collision		
avoidance system	1	69
Computer techniques		
for investigating man–machine system design problems	1	60
for simulating operator performance	1	18
Crash		
of lightplanes	4	237
Design criteria		
for aircraft ground emergency exits	3	174
Design criteria—*continued.*		
for intelligence display formats	2	86
Discrimination		
at different levels of drowsiness and sleep	1	8
of direction of movement	3	166
Displays		
alpha-numeric	2	88, 93
cartographic	2	89
graphic trend type	2	89, 99, 108
in an intelligence control center	2	86
of COED panel	3	162
of error information	2	77
panel	1	73
vertical vs. horizontal	2	93
visual, monitoring of	4	213
Drowsiness		
effects on human performance	1	1
Editorials	3	211
	4	303
EEG		
as criterion of drowsiness and sleep levels	1	14
patterns characteristic of drowsiness and sleep levels	1	2
Emergency exits		
design considerations in aircraft	3	174
Environment		
field, testing of	4	245
in space (visual)	3	166
Escape		
design of capsule	1	36
from aircraft ground emergency exits	3	174
devices for exit	3	178
rate of exit	3	181
Ethics		
scientific and professional (editorial)	4	303
Factor analysis		
of lightplane accident data	4	237
Feedback		
of information	2	77
relationship with human performance	2	77
Field testing		
control problems	4	248
problems involved in	4	246
similarities to laboratory testing	4	247
Graphs		
types and effect on performance	2	99, 108
Human factors		
research in industry and business	4	253

	No.	Page
Injury		
in aircraft crashes	4	237
Instruments		
for angle measurement	1	29
Gauss eyepiece	1	30
Learning		
at different levels of drowsiness and sleep	1	10
relationship to performance under different loads	1	53
with teaching machines	4	286
Luminance		
affecting perception of movement in depth	3	166
Measurements		
anthropometric	1	36
	3	174
Movement		
perception of, in depth	3	166
speed of, as affecting observer accuracy	3	166
Operators, human		
ability in tracking task as function of information feedback	2	77
accuracy in angle measurement and transfer	1	29
accuracy in estimating airplane speed	4	284
accuracy as function of experience	1	29
method for simulating performance of	1	18
monitoring behavior of	4	213
performance of as affected by abstract coding methods	2	120
variables that affect performance of	2	87
Perception		
variables involved in vehicle steering	4	222
Performance		
affected by abstract coding methods	2	120
affected by drowsiness and sleep	1	1
affected by problem load	1	53
affected by target-background coding combinations	2	131
affected by type of visual display	2	87, 93, 99
affected by visual load and response complexity	4	213
in vehicle steering task	4	222
of operators	1	18, 29
	2	77, 87
of pilots, as affected by cockpit vertical accelerations	4	229
on tracking tasks	2	77
related to precision of feedback information	2	77
related to training and learning	1	53
variables affecting (general)	2	87
Photogrammetry		
anthropometric	1	36
Population		
aircraft travelling public	3	177
Project Mercury		
description of astronaut's task	3	149
Recognition		
as independent task factor	2	129
of coding categories by operators	2	128
Research		
human factors, in industry and business	4	253
Search factor		
as independent of recognition task factor	2	129
Simulators		
cockpit, 'Pilot-Operated Dynamic Flight'	4	229
COED (Computer Operator Electronic Display)	1	61
historical (editorial)	3	211
performance	1	18
Sleep		
effects on human performance	1	1
Space operations		
manned	3	149
visual skills required	3	166
Speed		
driving (automobile)	4	222
visual estimate of (airplane)	4	284
Steering		
analysis of in vehicles	4	222
velocity-modulated system	4	223
Stress		
physical, during space flight in Mercury capsule	3	163
Symbols		
used in abstract coding methods	2	121
used in COED	1	63
used in operator sequence diagrams	1	67
Systems design		
collision avoidance	1	69
field test	4	245
intelligence display formats	2	86
man–machine		
device for experimental study of	1	60
measurement under field operational conditions	4	245
technique for evaluation of	1	18
tool for analysis of (Operational Sequence Diagram)	1	66
Target		
coding	2	132
Task analysis		
of aircraft landing	1	23
of astronaut in Project Mercury	3	149

	No.	Page
Task analysis—*continued*		
of linear information processing system	1	53
of missile launching	1	24
Tasks		
of astronaut	3	149
tracking	2	77, 80
	4	229
vehicle steering	4	222
visual skills required in manned space operations	3	166
Teaching machines		
for curriculum development	4	286
Tracking		
affected by cockpit vertical accelerations	4	229
affected by precision of informational feedback	2	77
errors on "easy" and "difficult" tasks	2	80
Velocity		
affecting perception of movement in depth	3	166
as factor in visual estimates of airplane speed	4	284
Vigilance		
affected by visual load and response complexity	4	213
Vision		
perceived movement in depth	3	166
visual estimates of airplane speed	4	284
Visual acuity		
as related to operator accuracy	1	33
Visual displays		
abstract coding of	2	120
alpha-numeric	2	88, 93
effects on operator performance	2	93
graphic	2	99
monitoring of	4	213
vertical vs. horizontal presentations	2	93
